

Threats to national security and human life can come in many forms and much of the time they can be identified and mitigated with the right technologies. Most Security Operations lack the expertise to research and find the right solutions that meet their policies and requirements, let alone the limited resources and knowledge to efficiently and economically integrate these technologies into their day-to-day operations

Areas of Expertise

- Wireless Intrusion Detection
- Concealed Weapon Detection
- Early Warning Drone/UAV Detection
- Medical Device Security
- Data Storage and Transport Protection

Sengex is a leader in large scale cyber and physical threat detection and mitigation. Our security engineering practices develops, integrates and deploys the most complete threat detection, prevention, and mitigation solutions in the areas of medical devices, wireless devices, UAV/Drones and weapons, resulting in the removal of targeted threats. Sengex’s services and solutions are based on a deep understanding of our client’s requirements and a proven ability to deliver solutions that utilize third-party products, as well as our own.

Sengex has partnered with leaders in early-warning threat detection technologies that have proven track records in their areas of proficiency. Working closely with our partners and customers, Sengex has become the subject matter expert to the solutions we represent, and how they are best utilized to meet and surpass customer’s expectations to their efficacy and value in their security operations.

Sengex’s THREAT (Threat Reduction Engineering and Assessment Team) is a results-oriented team of professionals that uses proven processes specifically designed to delivery the best solution to achieve early-warning threat detection and protection. THREAT services include:

- Clearly identifying and understanding client needs and develop or tailoring available solution to meet those needs
- Identifying solutions that not only address a need or problem, but also achieves optimum efficiency in ongoing operation
- Selecting the right technologies and practices that address client’s requirements from both a security and business need perspective
- Provide turnkey engagement for install and validation of solution via our “Proof of Concept” process all the way until system deployment and ongoing support
- Achieve maximum efficiency to overall security practices through integration of solutions, or multiple technologies into existing security operations.

The Sengex team has 120+ years of combined experience in understanding and implementing threat security technologies into established security operations, that minimize disruption, enhance capabilities and seamlessly become part of daily operations against both physical and cyber threats.
